● ABOUT ME

Flutter & Android Developer with hands-on experience in building cross-platform and native mobile applications using Flutter (Dart) and Java. I have developed multiple projects that strengthened my understanding of Firebase Authentication, Cloud Firestore, REST API integration, state management, and structured application architecture including MVVM and Repository patterns. I have worked on AI-integrated mobile applications, including a ChatGPT-powered Android chat app and an Agentive AI Project Manager built with Flutter and Groq LLM API (Llama 3.3-70B), where I applied prompt engineering techniques to enable intelligent task allocation and automated project proposal generation. I have a strong understanding of core concepts such as Provider, local SQLite storage, JSON parsing, real-time data sync, and role-based UI design. I am seeking an opportunity where I can contribute to real-world projects, collaborate with experienced developers, and continue growing as a mobile application developer.

● WORK EXPERIENCE

INTERNSHIP – JEUX DEVELOPERS – 01/08/2025 – 01/10/2025 – SAHIWAL, PAKISTAN

- Learned and applied Flutter (Dart) framework from scratch, building hands-on UI components and multi-screen applications during the internship period.
- Implemented State Management techniques using Provider, understanding the difference between stateful/ stateless widgets and efficient UI rebuilding.
- Participated in weekly technical assessments to evaluate Flutter concepts, demonstrating consistent progress and self-driven learning ability.
- Independently practiced and reinforced concepts outside internship hours, resulting in successfully building personal projects including AI-integrated apps using Firebase and LLM APIs.

● SKILLS

Dart | Flutter | Java | Git / GitHub | restful API | State Management | Firebase | Android Studio

● EDUCATION AND TRAINING

2022 – 2026
BACHELORS IN COMPUTER SCIENCE University of Southern Punjab

● PROJECTS

Notes App

- Built Android Notes App in Java using Android Studio with full Create, Read, Update, Delete (CRUD) functionality
- Integrated Firebase Authentication with email verification flow for secure user login and account creation
- Used Cloud Firestore as real-time cloud database; notes auto-sync across sessions using FirestoreRecyclerAdapter
- Designed multi-screen architecture: Splash → Login → Main → Note Detail, with proper activity lifecycle management

Easy Chat

- Built Easy Chat Android app in Java using Android Studio with real-time AI conversation powered by OpenAI ChatGPT API
- Implemented REST API integration using HTTP client for sending user messages and receiving AI-generated responses
- Handled JSON request/response parsing to extract and display model output in a dynamic chat interface
- Designed conversational UI with message bubbles, input field, and send button for smooth user experience
- Managed API key configuration and network calls on background threads to keep UI responsive

Agentive AI Project Manager

- Developed a cross-platform Flutter app with role-based access control — separate dashboards for Manager, Employee, and Client roles with Firebase Auth
- Integrated Groq LLM API (Llama 3.3-70B) as an AI agent for intelligent task-to-employee assignment based on skills, priority, and workload analysis
- Used prompt engineering to customize AI behavior for two distinct modes: task assignment and client proposal generation
- Built real-time statistics dashboard with live Cloud Firestore streams showing employee count, total tasks, and completed task metrics
- Integrated Firebase Cloud Messaging (FCM) for push notifications with automatic token refresh and storage in Firestore

Car Pulse

- Developed Car Pulse in Flutter (Dart) following MVVM architecture — clean separation between View, ViewModel, and Repository layers
- Implemented local SQLite database using sqflite for offline-first data persistence of car profiles, maintenance records, and trip logs
- Applied Provider for state management with dedicated ViewModels for Cars, Maintenance, and Trips — scalable and testable structure
- Designed multi-screen UI: Home (car list), Car Dashboard, Add Car, Maintenance History, Trip Tracker, and Add Maintenance screens

● HOBBIES AND INTERESTS

Interests

- Exploring AI/LLM integrations in mobile applications and keeping up with advancements in generative AI tools
- Building side projects to experiment with new Flutter packages, Firebase features, and third-party APIs
- Following tech communities and developer blogs to stay updated with modern mobile development trends
